## DETAILED ACTION

***Note: This is in response to an amendment filed 05/25/2007.***

### ***Claim Rejections - 35 USC § 102***

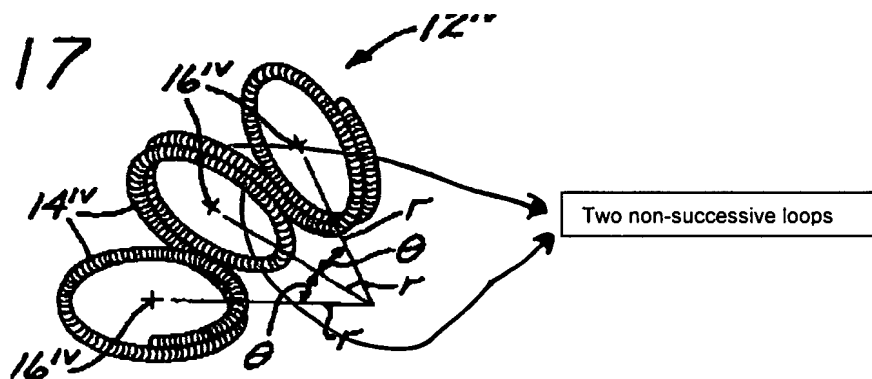

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Schaefer et al. (U.S. 7,029,486).

Note in figures 1-4 and 8-17, a member (10) forms a series of at least four successive loops (14a and 14b), wherein each loops (14a,14b) having a different axis (16) and lying in a separate plane from any other loop; at least two non-successive loops (14IV as shown in figure 17) lying in respective planes which are substantially parallel; and wherein each plane forming an angle greater than 30 degrees with any immediately proceeding and any immediately succeeding plane; and furthermore, wherein the loops (14a14b) can be wound in clockwise or counterclockwise direction and having a diameter smaller than a diameter of an immediately preceding loop.

### ***Response to Arguments***

Applicant's arguments filed 05/25/2007 have been fully considered but they are not persuasive. With respect to claims 1, as shown in figures 8, 9, and 17 of Schaefer et al. device appear to have four successive loops in which successive loops lie in planes forming an angle of greater than 30 degrees and furthermore, having at least two non-successive loops lying in respective planes which are substantially parallel to one another (as shown drawing above). As to claims 2, 3, and 8-9, Schaefer et al. device disclose in figure 17, the angle between each of the successive loops is between 45 and 90 degrees which can be perpendicular to one another and that one loop (as shown in figure 16) comprises an elliptical and oval forms. At least for these reasons, the Examiner disagrees with Applicant's remarks and has maintained the grounds of rejection under 35 U.S.C. 102 (e) as being anticipated by Schaefer et al. (U.S. 7,029,486) for the reasons as set forth in the above statement.

### ***Conclusion***

1. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

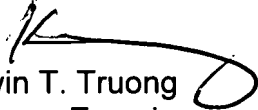

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
